Core Caseworks is the manufacturer of the first in wall computer case. Please visit www.corecaseworks.com to for much more information.

With the advent of Media Center Software Technologies, many households are seeing their cable boxes, radio, and CD/DVD Libraries replaced with one Media Center Computer. Modern computers have the capabilities of delivering rich web content, such as streaming radio and video, as well as incorporating modernmedia players such as Blue-Ray disk players, and HDTV tuners. Add the fact that your TV is able to be wall mounted, and you just obsoleted your TV stand, and all the components that were housed inside of it.

This is where Core Caseworks Products come in. With the computer case installed in the wall, all wires can be run through the wall creating a very clean appearance. There is even enough room to house your wireless receivers, and full size ATX Components.
